Profile

Passionate and dedicated Data Analyst with a strong foundation in data analysis tools and programming languages. Proficient in data manipulation, visualization, and statistical modeling. Eager to leverage skills in handling end-to-end data analysis processes, from data cleaning to generating actionable insights. Committed to transforming raw data into compelling narratives that contribute to informed business decisions.

Certificates

- Google Cloud Digital Leader Certification
- Oracle Cloud Infrastructure 2025 Certified AI Foundations Associate
- Master Vertex AI: Leveraging LLMs with Text-Embeddings API

Education

Bachelor of Technology, Information Technology
Kalinga Institute of Industrial Technology (KIIT)
Jul 2023 | Odisha, India

Skills

Programming & Scripting Languages

- Python (Pandas, NumPy, Scikit-learn), SQL (Joins, Subqueries, Optimization)
- Basic Knowledge: Java, R

Databases & Big Data

- Relational Databases: MySQL
- NoSQL Databases: MongoDB
- Big Data Technologies: Hadoop (MapReduce, HDFS), Spark

Data Engineering & ETL Tools

- Data Cleaning, Feature Engineering, Data Integration
- Proficient in ETL pipelines and workflow automation tools (Airflow, Talend)

Data Visualization & Reporting

- Tableau, Power BI, Microsoft Excel (Macros, VBA, Advanced Pivot Tables)
- Interactive Dashboards, Data Storytelling

Automation Tools

- UiPath, Selenium

Soft Skills

- Team Collaboration, Critical Thinking, Problem-Solving, Analytical Thinking, Time Management

Courses

Data Scientist Bootcamp

upGrad

Dec 2023 – Jul 2024

- Developed expertise in data cleaning, feature engineering, and model evaluation using advanced tools and techniques.

Work Experience

Project Engineer - Wipro Technologies

Client: Apple Inc.

Mar 2025 – Present | Hyderabad

- Automated data extraction and validation processes using Python and SQL, reducing manual reporting effort by 30% and ensuring higher data accuracy for business-critical dashboards.
- Built reusable scripts and workflows to process large datasets from multiple sources, enabling faster insights and supporting decision-making across Apple's operations team.
- Partnered with cross-functional teams to design performance reports and visualization templates in Excel/Power BI, improving report turnaround time by 25%.

SQL Data Analyst Intern – HR Analytics System

Psylig

Dec 2023 – Feb 2024

- Analyzed big data for uncovering trends, patterns resulting in 35% increase in data driven insights for HR decision making for more than 10 HR managers.
- Constructed and optimized SQL queries to fetch the data from databases, increased data access efficiency by 30% and improved query response time by 15%.
- Worked with cross-functional teams to identify process improvements, streamlined HR operations, and removed manual tasks, saving approximately 100 hours of effort per month.
- Compiled comprehensive reports that captured key HR metrics, data interpretation to enable fact-based decision making to support the workforce across the organization.

Projects

FinGPT – AI-Powered Financial Assistant

- Designed and deployed an AI-driven financial assistant using LangChain, HuggingFace, and Streamlit, enabling real-time stock market data retrieval, financial Q&A, and investment insights.
- Integrated live stock price analysis with yFinance and built interactive dashboards, improving accessibility of financial data for users and reducing manual research time.
- Implemented NLP-based query handling to generate personalized insights, showcasing expertise in data pipelines, visualization, and LLM-powered analytics.

SecurePay

Detecting fraudulent credit card transactions in real time

- Explored an extensive dataset of 284,807 transactions by European cardholders, highlighted a highly unbalanced distribution with fraud accounting for just 0.172%, requiring specialized techniques. accurate classification model development.
- Implemented a suite of ensemble classifiers to assess predictive modeling capabilities.
- Utilized LightGBM model with varied validations, achieving strong AUC scores of 97.4% for validation and 94.6% for testing. Cross-validation yielded a robust AUC score of 93%, showcasing effective fraud detection.

Superstore Sales Maximization

Leveraging Tableau Dashboards for Data-Driven Insights

- Analyzed Superstore sales data using Tableau, creating interactive dashboards to visualize sales, profit, and customer behavior across regions and product categories.
- Identified high and low-performing regions and product categories, optimizing promotional strategies to boost profitability and sales.
- Designed visualizations to track KPIs like revenue and profit trends, providing actionable recommendations that improved efficiency and guided decision-making.
